General Class Question Pool

G1: COMMISSION'S RULES

G1A: - General class control operator frequency privileges; primary and secondary allocations
G1A01 On which HF/MF bands is a General class license holder granted all amateur frequency privileges?
C 160 meters, 60 meters, 30 meters, 17 meters, 12 meters, and 10 meters
G1A02 On which of the following bands is phone operation prohibited? B 30 meters
G1A03 On which of the following bands is image transmission prohibited?
B 30 meters
G1A04 Which of the following amateur bands is restricted to communication only on specific channels, rather than frequency ranges?
D 60 meters
G1A05 Which of the following frequencies is in the General class portion of the 40-meter band (in ITU Region 2)? A 7.250 MHz
G1A06 Which of the following frequencies is within the General class portion of the 75-meter phone band? C 3900 kHz
······································
G1A07 Which of the following frequencies is within the General class portion of the 20-meter phone band?
C 14305 kHz
G1A08 Which of the following frequencies is within the General class portion of the 80-meter band?
C 3560 kHz
G1A09 Which of the following frequencies is within the General class portion of the 15-meter band?
C 21300 kHz
G1A10 Which of the following frequencies is available to a control operator holding a General class license?
D All these choices are correct
When General class licensees are not permitted to use the entire voice portion of a band, which portion of the voice segment is generally available to them?
B The upper frequency end
G1A12 Which of the following applies when the FCC rules designate the Amateur Service as a secondary user on a band?
C Amateur stations can use the band only if they do not cause harmful interference to primary users
G1A13 What is the appropriate action if, when operating on either the 30-meter or 60-meter bands, a station in the primary service interferes with your contact?
D Move to a clear frequency or stop transmitting
G1A14 Which of the following may apply in areas under FCC jurisdiction outside of ITU Region 2?
D Frequency allocations may differ
G1A15 What portion of the 10-meter band is available for repeater use?
D The portion above 29.5 MHz

		nna structure limitations; good engineering and good amateur practice; beacon operation; prohibited transmissions; smitting radio signals
G1B01		at is the maximum height above ground to which an antenna structure may be erected without requiring fication to the FAA and registration with the FCC, provided it is not at or near a public use airport?
	С	200 feet
G1B02		n which of the following conditions must beacon stations comply?
	D	There must be no more than one beacon signal transmitting in the same band from the same station location
G1B03		ch of the following is a purpose of a beacon station as identified in the FCC rules? Observation of propagation and reception
	A	observation of propagation and reception
G1B04		ch of the following transmissions is permitted?
	С	Occasional retransmission of weather and propagation forecast information from U.S. government stations
G1B05	Whi	ch of the following one-way transmissions are permitted?
L	В	Transmissions necessary to assist learning the International Morse code
G1B06		er what conditions are state and local governments permitted to regulate Amateur Radio antenna structures?
	D	Amateur Service communications must be reasonably accommodated, and regulations must constitute the minimum practical to accommodate a legitimate purpose of the state or local entity
G1B07	Wha	at are the restrictions on the use of abbreviations or procedural signals in the Amateur Service?
	В	at are the restrictions on the use of abbreviations or procedural signals in the Amateur Service? They may be used if they do not obscure the meaning of a message
G1B08	Whe	en choosing a transmitting frequency, what should you do to comply with good amateur practice?
	D	All these choices are correct
G1B09	On v	what HF frequencies are automatically controlled beacons permitted?
	D	28.20 MHz to 28.30 MHz
G1B10	Wha	at is the power limit for beacon stations?
	С	100 watts PEP output
G1B11	ama	o or what determines "good engineering and good amateur practice," as applied to the operation of an teur station in all respects not covered by the Part 97 rules?
	Α	The FCC
G1B12		en is it permissible to communicate with amateur stations in countries outside the areas administered by the eral Communications Commission?
	В	When the contact is with amateurs in any country except those whose administrations have notified the ITU that they object to such communications

lC: - Tr	ansmitter power regulations; data emission standards; 60-meter operation requirements
	hat is the maximum transmitting power an amateur station may use on 10.140 MHz? A 200 watts PEP output
G1C02 W	hat is the maximum transmitting power an amateur station may use on the 12-meter band?
	C 1500 watts PEP output
	/hat is the maximum bandwidth permitted by FCC rules for Amateur Radio stations transmitting on USB equencies in the 60-meter band?
	A 2.8 kHz
G1C04 W	I only the minimum power necessary to carry out the desired communications should be used
G1C05 W	/hat is the limit for transmitter power on the 28 MHz band for a General Class control operator?
	C 1500 watts PEP output
G1C06 W	/hat is the limit for transmitter power on the 1.8 MHz band?
I	D 1500 watts PEP output
G1C07 W	hat is the maximum symbol rate permitted for RTTY or data emission transmission on the 20-meter band?
ļ	D 300 baud
G1C08 W	hat is the maximum symbol rate permitted for RTTY or data emission transmitted at frequencies below 28 M
	D 300 baud
	/hat is the maximum symbol rate permitted for RTTY or data emission transmitted on the 1.25-meter and 70- entimeter bands? A 56 kilobaud
G1C10 W	hat is the maximum symbol rate permitted for RTTY or data emission transmissions on the 10-meter band?
•	C 1200 baud
G1C11 W	/hat is the maximum symbol rate permitted for RTTY or data emission transmissions on the 2-meter band? B 19.6 kilobaud
	hich of the following is required by the FCC rules when operating in the 60-meter band? If you are using an antenna other than a dipole, you must keep a record of the gain of your antenna
G1C13 W	hat must be done before using a new digital protocol on the air?
	C Publicly document the technical characteristics of the protocol
	/hat is the maximum power limit on the 60-meter band?
•	C ERP of 100 watts PEP with respect to a dipole
G1C15 W	/hat measurement is specified by FCC rules that regulate maximum power output?
i	D PEP

G1D: - Volunteer Examiners and Volunteer Examiner Coordinators; temporary identification; element credit	
G1D01 Who may receive partial credit for the elements represented by an expired Amateur Radio license? A Any person who can demonstrate that they once held an FCC-issued General, Advanced, of Amateur Extra class license that was not revoked by the FCC)r
G1D02 What license examinations may you administer when you are an accredited VE holding a General class license?	operator
C Technician only	
G1D03 On which of the following band segments may you operate if you are a Technician class operator and he Certificate of Successful Completion of Examination (CSCE) for General class privileges?	ave a
C On any General or Technician class band segment	
G1D04 Which of the following is a requirement for administering a Technician class license examination? A At least three General class or higher VEs must observe the examination	
G1D05 Which of the following must a person have before they can be an administering VE for a Technician class examination?	ss license
D An FCC General class or higher license and VEC accreditation	
G1D06 When must you add the special identifier "AG" after your call sign if you are a Technician class licensee a Certificate of Successful Completion of Examination (CSCE) for General class operator privileges, but has not yet posted your upgrade on its website?	
A Whenever you operate using General class frequency privileges	
G1D07 Volunteer Examiners are accredited by what organization?	
C A Volunteer Examiner Coordinator	
G1D08 Which of the following criteria must be met for a non-U.S. citizen to be an accredited Volunteer Examin	er?
B The person must hold an FCC granted Amateur Radio license of General class or above	
G1D09 How long is a Certificate of Successful Completion of Examination (CSCE) valid for exam element credit	:?
C 365 days	
G1D10 What is the minimum age that one must be to qualify as an accredited Volunteer Examiner?	
B 18 years	
G1D11 If a person has an expired FCC issued Amateur Radio license of General class or higher, what is require they can receive a new license?	d before
D The applicant must pass the current Element 2 exam	

G1E:	Control categories; repeater regulations; third-party rules; ITU regions; automatically controlled digital station
G1E01	Which of the following would disqualify a third party from participating in stating a message over an amateur station?
	A The third party's amateur license has been revoked and not reinstated
G1E02	When may a 10-meter repeater retransmit the 2-meter signal from a station that has a Technician class control operator?
	D Only if the 10-meter repeater control operator holds at least a General class license
G1E03	What is required to conduct communications with a digital station operating under automatic control outside the automatic control band segments?
	A The station initiating the contact must be under local or remote control
G1E04	Which of the following conditions require a licensed Amateur Radio operator to take specific steps to avoid harmful interference to other users or facilities?
	D All these choices are correct
G1E05	What types of messages for a third party in another country may be transmitted by an amateur station? C Only messages relating to Amateur Radio or remarks of a personal character, or messages relating
	to emergencies or disaster relief
G1E06	The frequency allocations of which ITU region apply to radio amateurs operating in North and South America? C Region 2
G1E07	In what part of the 13-centimeter band may an amateur station communicate with non-licensed Wi-Fi stations?
	D No part
G1E08	When using modified commercial Wi-Fi equipment to construct an Amateur Radio Emergency Data Network (AREDN), what is the maximum allowed PEP transmitter output power?
	B 10 watts
G1E09	Under what circumstances are messages that are sent via digital modes exempt from Part 97 third-party rules that apply to other modes of communication?
	A Under no circumstances
G1E10	Why should an amateur operator normally avoid transmitting on 14.100, 18.110, 21.150, 24. 930 and 28.200 MHz?
	A System of propagation beacon stations operates on those frequencies
G1E11	What is the Part 97 limit on the maximum bandwidth occupied by an automatically controlled digital station? B 500 Hz

G2: OPERATING PROCEDURES - Phone operating procedures; USB/LSB conventions; breaking into a contact; VOX operation G2A: Which sideband is most commonly used for voice communications on frequencies of 14 MHz or higher? G2A01 A Upper sideband Which of the following modes is most commonly used for voice communications on the 160-meter, 75-meter, and G2A02 40-meter bands? **B** Lower sideband G2A03 Which of the following is most commonly used for SSB voice communications in the VHF and UHF bands? A Upper sideband Which mode is most commonly used for voice communications on the 17-meter and 12-meter bands? G2A04 A Upper sideband G2A05 Which mode of voice communication is most commonly used on the HF amateur bands? C Single sideband Which of the following is an advantage when using single sideband, as compared to other analog voice modes on G2A06 the HF amateur bands? D Less bandwidth used and greater power efficiency G2A07 Which of the following statements is true of the single sideband voice mode? B Only one sideband is transmitted; the other sideband and carrier are suppressed G2A08 What is the recommended way to break in to a phone contact? B Say your call sign once G2A09 Why do most amateur stations use lower sideband on the 160-meter, 75-meter, and 40-meter bands? D It is good amateur practice

G2A10 Which of the following statements is true of voice VOX operation versus PTT operation?

G2A11 Generally, who should respond to a station in the contiguous 48 states who calls "CQ DX"?

G2A12 What control is typically adjusted for proper ALC setting on an amateur single sideband transceiver?

B It allows "hands free" operation

C Any stations outside the lower 48 states

B Transmit audio or microphone gain

2B:	- Operating courtesy; band plans; emergencies, including drills and emergency communications
G2B01	Which of the following is true concerning access to frequencies in non-emergency situations?
E	C Except during FCC-declared emergencies, no one has priority access to frequencies
F	
G2B02	What is the first thing you should do if you are communicating with another amateur station and hear a station distress break in?
	B Acknowledge the station in distress and determine what assistance may be needed
G2B03	What is good amateur practice if propagation changes during a contact and you notice interference from other stations on the frequency?
	C Attempt to resolve the interference problem with the other stations in a mutually acceptable
	manner
G2B04	When selecting a CW transmitting frequency, what minimum separation should be used to minimize interferent to stations on adjacent frequencies?
	B 150 to 500 Hz
G2B05	When selecting an SSB transmitting frequency, what minimum separation should be used to minimize interference to stations on adjacent frequencies?
	C Approximately 3 kHz
G2B06	What is a practical way to avoid harmful interference on an apparently clear frequency before calling CQ on CW or phone?
	A Send "QRL?" on CW, followed by your call sign; or, if using phone, ask if the frequency is in use, followed by your call sign
G2B07	Which of the following complies with good amateur practice when choosing a frequency on which to initiate a call?
	C Follow the voluntary band plan for the operating mode you intend to use
G2B08	What is the voluntary band plan restriction for U.S. station transmitting within the 48 contiguous states in the 50.1 to 50.125 MHz band segment?
	A Only contacts with stations not within the 48 contiguous states
G2B09	Who may be the control operator of an amateur station transmitting in RACES to assist relief operations during "disaster?
	A Only a person holding an FCC-issued amateur operator license
	
G2B10	When is an amateur station allowed to use any means at its disposal to assist another station in distress?
	C At any time during an actual emergency
C2D11	What frequency should be used to send a distress call?

G2C:	- CW operating procedures and procedural signals; Q signals and common abbreviations: full break-in
G2C0	Which of the following describes full break-in telegraphy (QSK)?
	D Transmitting stations can receive between code characters and elements
G2C0	What should you do if a CW station sends "QRS?"
L	A Send slower
G2C0	What does it mean when a CW operator sends "KN" at the end of a transmission?
I	C Listening only for a specific station or stations
G2C0	4 What does the Q signal "QRL?" mean?
I	D "Are you busy?" or "Is this frequency in use?"
G2C0	What is the best speed to use when answering a CQ in Morse code?
2	B The fastest speed at which you are comfortable copying, but no faster than the CQ
G2C0	6 What does the term "zero beat" mean in CW operation?
	D Matching the transmit frequency to the frequency of a received signal
G2C0	7 When sending CW, what does a "C" mean when added to the RST report?
	A Chirpy or unstable signal
G2C0	What prosign is sent to indicate the end of a formal message when using CW?
	C AR
G2C0	9 What does the Q signal "QSL" mean?
•••••	C I acknowledge receipt
G2C1	What does the Q signal "QRN" mean?
	D I am troubled by static
G2C1	What does the Q signal "QRV" mean?
	D I am ready to receive messages

	nteer Monitoring Program; HF operations at is the Volunteer Monitoring Program?
A	Amateur volunteers who are formally enlisted to monitor the airwaves for rules violations
G2D02 Wh	ich of the following are objectives of the Volunteer Monitoring Program?
В	To encourage amateur radio operators to self-regulate and comply with the rules
G2D03 Wh	at skills learned during hidden transmitter hunts are of help to the Volunteer Monitoring Program?
В	Direction finding used to locate stations violating FCC rules
G2D04 Wh	ich of the following describes an azimuthal projection map? A map that shows true bearings and distances from a particular location
В	A map that shows true bearings and distances from a particular location
	ich of the following is a good way to indicate on a clear frequency in the HF phone bands that you are looki a contact with any station?
С	Repeat "CQ" a few times, followed by "this is," then your call sign a few times, then pause to listen, repeat as necessary
G2D06 Hov	w is a directional antenna pointed when making a "long-path" contact with another station?
С	180 degrees from the station's short-path heading
L	ich of the following are examples of the NATO Phonetic Alphabet?
D	Alpha, Bravo, Charlie, Delta
G2D08 Wh	at is a reason why many amateurs keep a station log?
D	To help with a reply if the FCC requests information
G2D09 Wh	ich of the following is required when participating in a contest on HF frequencies?
С	Identify your station per normal FCC regulations
L	at is QRP operation?
В	Low-power transmit operation
G2D11 Wh	ich of the following is typical of the lower HF frequencies during the summer?
D	High levels of atmospheric noise or "static"

G2E:	- Diait	al operating procedures
· · · · · · · · · · · · · · · · · · ·		ich mode is normally used when sending RTTY signals via AFSK with an SSB transmitter?
GZEU.		LSB
		LOD
G2E02	2 Hov	v can a PACTOR modem or controller be used to determine if the channel is in use by other PACTOR stations
	В	Put the modem or controller in a mode which allows monitoring communications without a connection
G2E03		at symptoms may result from other signals interfering with a PACTOR or WINMOR transmission?
	D	All these choices are correct
G2E04	bea	at segment of the 20-meter band is most often used for digital transmissions (avoiding the DX propagation cons)?
	В	14.070 - 14.112 MHz
G2E05		at is the standard sideband used to generate a JT65, JT9, or FT8 digital signal when using AFSK in any ateur band?
	В	USB
G2E06		at is the most common frequency shift for RTTY emissions in the amateur HF bands? 170 Hz
G2E07		at segment of the 80-meter band is most commonly used for digital transmissions? 3570 - 3600 kHz
G2E08	8 In v	what segment of the 20-meter band are most PSK31 operations commonly found?
	D	Below the RTTY segment, near 14.070 MHz
G2E09	9 Hov	v do you join a contact between two stations using the PACTOR protocol?
***************************************	С	Joining an existing contact is not possible, PACTOR connections are limited to two stations
G2E10	0 Wh i	ich of the following is a way to establish contact with a digital messaging system gateway station?
4		Transmit a connect message on the station's published frequency
G2F1		ich of the following is characteristic of the FT8 mode of the WSJT-X family?
LOZZZ		Typical exchanges are limited to call signs, grid locators, and signal reports
G2E12	2 Wh i	ch of the following connectors would be a good choice for a serial data port?
	D	DE-9
G2E13	3 Wh i	ch communication system sometimes uses the internet to transfer messages?
***************************************	Α	Winlink
G2E14		at could be wrong if you cannot decode an RTTY or other FSK signal even though it is apparently tuned in perly?
	D	All these choices are correct
6351		ich of the following is a requirement when using the ETS disited mode?
G2E1	b wn	ch of the following is a requirement when using the FT8 digital mode? Computer time accurate within approximately 1 second
	В	Compater time accurate within approximately 1 Second

G3: RADIO WAVE PROPAGATION

- Sunspots and solar radiation; ionospheric disturbances; propagation forecasting and indices

G3A:

G3A01 What is the significance of the sunspot number about HF propagation? Higher sunspot numbers generally indicate a greater probability of good propagation at higher frequencies What effect does a Sudden Ionospheric Disturbance have on the daytime ionospheric propagation of HF radio G3A02 B It disrupts signals on lower frequencies more than those on higher frequencies G3A03 Approximately how long does it take the increased ultraviolet and X-ray radiation from solar flares to affect radio propagation on Earth? C 8 minutes G3A04 Which of the following are least reliable for long-distance communications during periods of low solar activity? D 15 meters, 12 meters, and 10 meters G3A05 What is the solar flux index? D A measure of solar radiation at 10.7 centimeters wavelength G3A06 What is a geomagnetic storm? D A temporary disturbance in Earth's magnetosphere G3A07 At what point in the solar cycle does the 20-meter band usually support worldwide propagation during daylight D At any point in the solar cycle G3A08 Which of the following effects can a geomagnetic storm have on radio propagation? B Degraded high-latitude HF propagation G3A09 What benefit can high geomagnetic activity have on radio communications? A Auroras that can reflect VHF signals G3A10 What causes HF propagation conditions to vary periodically in a roughly 28-day cycle? C The sun's rotation on its axis G3A11 How long does it take charged particles from coronal mass ejections to affect radio propagation on Earth? D 20 to 40 hours G3A12 What does the K-index indicate? B The short-term stability of Earth's magnetic field G3A13 What does the A-index indicate? C The long-term stability of Earth's geomagnetic field How are radio communications usually affected by the charged particles that reach Earth from solar coronal G3A14 holes? B HF communications are disturbed

G3B: - Maxi	mum Usable Frequency; Lowest Usable Frequency; propagation
	at is a characteristic of skywave signals arriving at your location by both short-path and long-path pagation?
D	A slightly delayed echo might be heard
G3B02 Wh	at factors affect the MUF?
D	All these choices are correct
	ich of the following applies when selecting a frequency for lowest attenuation when transmitting on HF? Select a frequency just below the MUF
and	at is a reliable way to determine if the MUF is high enough to support skip propagation between your station a distant location on frequencies between 14 and 30 MHz?
Α	Listen for signals from an international beacon in the frequency range you plan to use
the	at usually happens to radio waves with frequencies below the MUF and above the LUF when they are sent int ionosphere?
Α	They are bent back to Earth
G3B06 Wh	at usually happens to radio waves with frequencies below the LUF?
С	They are completely absorbed by the ionosphere
G3B07 Wh	at does LUF stand for?
Α	The Lowest Usable Frequency for communications between two points
G3B08 Wh	at does MUF stand for?
<u></u> В	The Maximum Usable Frequency for communications between two points
	at is the approximate maximum distance along the Earth's surface that is normally covered in one hop using F2 region?
C	2,500 miles
	at is the approximate maximum distance along the Earth's surface that is normally covered in one hop using E region?
В	1,200 miles
C2B11 Wh	at happens to HF propagation when the LUF exceeds the MUF?
	No HF radio frequency will support ordinary skywave communications over the path

3C: - Iono	spheric layers; critical angle and frequency; HF scatter; Near Vertical Incidence Skywave
	ich ionospheric layer is closest to the surface of Earth?
	The D layer
	ere on Earth do ionospheric layers reach their maximum height?
Α	Where the sun is overhead
G3C03 Wh	y is the F2 region mainly responsible for the longest distance radio wave propagation?
С	Because it is the highest ionospheric region
G3C04 Wh	at does the term "critical angle" mean, as used in radio wave propagation?
D	The highest takeoff angle that will return a radio wave to Earth under specific ionospheric conditions
G3C05 Wh	y is long-distance communication on the 40-meter, 60-meter, 80-meter, and 160-meter bands more difficult ing the day?
С	The D layer absorbs signals at these frequencies during daylight hours
C2C06 Wh	at is a characteristic of HF scatter?
	Signals have a fluttering sound
	Jiginio navo a nacco nig Joana
G3C07 Wh	at makes HF scatter signals often sound distorted?
D	Energy is scattered into the skip zone through several different radio wave paths
G3C08 Wh	y are HF scatter signals in the skip zone usually weak?
	Only a small part of the signal energy is scattered into the skip zone
G3C09 Wh	at type of propagation allows signals to be heard in the transmitting station's skip zone?
В	Scatter
G3C10 Wh	at is Near Vertical Incidence Skywave (NVIS) propagation?
В	Short distance MF or HF propagation using high elevation angles
G3C11 Wh	ich ionospheric layer is the most absorbent of long skip signals during daylight hours on frequencies below 1
rii 1	The D Large
D	The D layer

G4: AMATEUR RADIO PRACTICES G4A: Station operation and setup What is the purpose of the "notch filter" found on many HF transceivers? G4A01 B To reduce interference from carriers in the receiver passband What is one advantage of selecting the opposite, or "reverse," sideband when receiving CW signals on a typical G4A02 HF transceiver? C It may be possible to reduce or eliminate interference from other signals G4A03 What is normally meant by operating a transceiver in "split" mode? C The transceiver is set to different transmit and receive frequencies What reading on the plate current meter of a vacuum tube RF power amplifier indicates correct adjustment of the G4A04 plate tuning control? B A pronounced dip G4A05 What is a reason to use Automatic Level Control (ALC) with an RF power amplifier? C To reduce distortion due to excessive drive G4A06 What type of device is often used to match transmitter output impedance to an impedance not equal to 50 ohms? C Antenna coupler or antenna tuner G4A07 What condition can lead to permanent damage to a solid-state RF power amplifier? D Excessive drive power G4A08 What is the correct adjustment for the load or coupling control of a vacuum tube RF power amplifier? D Maximum power output without exceeding maximum allowable plate current G4A09 Why is a time delay sometimes included in a transmitter keying circuit? To allow time for transmit-receive changeover operations to complete properly before RF output is allowed G4A10 What is the purpose of an electronic keyer? B Automatic generation of strings of dots and dashes for CW operation Which of the following is a use for the IF shift control on a receiver? G4A11 A To avoid interference from stations very close to the receive frequency G4A12 Which of the following is a common use for the dual-VFO feature on a transceiver? C To permit monitoring of two different frequencies G4A13 What is one reason to use the attenuator function that is present on many HF transceivers? A To reduce signal overload due to strong incoming signals G4A14 What is likely to happen if a transceiver's ALC system is not set properly when transmitting AFSK signals with the radio using single sideband mode? B Improper action of ALC distorts the signal and can cause spurious emissions Which of the following can be a symptom of transmitted RF being picked up by an audio cable carrying AFSK data G4A15 signals between a computer and a transceiver? D All these choices are correct

G4A16 How does a noise blanker work?

G4A17

C By reducing receiver gain during a noise pulse

A Received signals may become distorted

What happens as the noise reduction control level in a receiver is increased?

0.45		
G4B:	,	and monitoring equipment; two-tone test
G4B01		at item of test equipment contains horizontal and vertical channel amplifiers?
	D	An oscilloscope
G4B02	2 Wh	ich of the following is an advantage of an oscilloscope versus a digital voltmeter?
	D	Complex waveforms can be measured
G4B03		ich of the following is the best instrument to use when checking the keying waveform of a CW transmitter? An oscilloscope
G4B04		at signal source is connected to the vertical input of an oscilloscope when checking the RF envelope pattern of ansmitted signal?
	D	The attenuated RF output of the transmitter
G4B05		y is high input impedance desirable for a voltmeter?
	D	It decreases the loading on circuits being measured
C/B06	Wh	at is an advantage of a digital voltmeter as compared to an analog voltmeter?
04000		Better precision for most uses
	Ū	
G4B07	7 Wh	at signals are used to conduct a two-tone test? Two non-harmonically related audio signals
	В	Two non-harmonically related audio signals
G4B08	trai	ich of the following instruments may be used to monitor relative RF output when making antenna and nsmitter adjustments?
	Α	A field strength meter
G4B09) Wh	ich of the following can be determined with a field strength meter?
	В	The radiation pattern of an antenna
G4B10		ich of the following can be determined with a directional wattmeter? Standing wave ratio
G4B11	Wh	ich of the following must be connected to an antenna analyzer when it is being used for SWR measurements?
	С	Antenna and feed line
G4B12	2 Wh	at problem can occur when making measurements on an antenna system with an antenna analyzer?
	В	Strong signals from nearby transmitters can affect the accuracy of measurements
G4B13	3 Wh	at is a use for an antenna analyzer other than measuring the SWR of an antenna system?
	С	Determining the impedance of coaxial cable
G4B14		at is an instance in which the use of an instrument with analog readout may be preferred over an instrument h a digital readout?
	D	When adjusting tuned circuits
G4B15		at type of transmitter performance does a two-tone test analyze? Linearity

C4C: Tabaré	in and the company of the transition of the company
ļ	erence to consumer electronics; grounding; DSP
	ch of the following might be useful in reducing RF interference to audio frequency devices?
В	Bypass capacitor
C4C02 Which	th of the following could be a cause of interference covering a wide range of frequencies?
G4C02 Will	th of the following could be a cause of interference covering a wide range of frequencies? Arcing at a poor electrical connection
C	Archig at a poor electrical connection
	t sound is heard from an audio device or telephone if there is interference from a nearby single sideband ne transmitter?
С	Distorted speech
G4C04 Wha	t is the effect on an audio device when there is interference from a nearby CW transmitter? On-and-off humming or clicking
band	t might be the problem if you receive an RF burn when touching your equipment while transmitting on an HF I, assuming the equipment is connected to a ground rod?
D	The ground wire has high impedance on that frequency
G4C06 What	t effect can be caused by a resonant ground connection?
G4C00 Wild	High RF voltages on the enclosures of station equipment
C	riigh KF voltages on the enclosures of station equipment
rods	
D	A soldered joint will likely be destroyed by the heat of a lightning strike
G4C08 Whic	th of the following would reduce RF interference caused by common-mode current on an audio cable?
Α	Placing a ferrite choke around the cable
G4C09 How	can a ground loop be avoided?
D	Connect all ground conductors to a single point
p	
G4C10 What	t could be a symptom of a ground loop somewhere in your station?
A	You receive reports of "hum" on your station's transmitted signal
G4C11 What	t technique helps to minimize RF "hot spots" in an amateur station?

C	Bonding all equipment enclosures together
G4C12 Which	h of the following is an advantage of a receiver DSP IF filter as compared to an analog filter?
Α	A wide range of filter bandwidths and shapes can be created
G4C13 Why	must the metal enclosure of every item of station equipment be grounded?
D	It ensures that hazardous voltages cannot appear on the chassis
- 1	

	is the purpose of a speech processor as used in a modern transceiver? Increase the intelligibility of transmitted phone signals during poor conditions
G4D02 Which	h of the following describes how a speech processor affects a transmitted single sideband phone signal?
	It increases average power
G4D03 Which	h of the following can be the result of an incorrectly adjusted speech processor?
D A	All these choices are correct
G4D04 What	does an S meter measure?
C	Received signal strength
	does a signal that reads 20 dB over S9 compare to one that reads S9 on a receiver, assuming a properly rated S meter?
D I	It is 100 times more powerful
A 1 G4D07 How (e is an S meter found? In a receiver much must the power output of a transmitter be raised to change the S meter reading on a distant receiv
	S8 to S9?
C g	Approximately 4 times
G4D08 What MHz?	frequency range is occupied by a 3 kHz LSB signal when the displayed carrier frequency is set to 7.178
c	7.175 to 7.178 MHz
G4D09 What	frequency range is occupied by a 3 kHz USB signal with the displayed carrier frequency set to 14.347 MH
В	14.347 to 14.350 MHz
G4D10 How o	close to the lower edge of the phone segment should your displayed carrier frequency be when using 3 k LSB?
Α .	At least 3 kHz above the edge of the segment
	close to the upper edge of the phone segment should your displayed carrier frequency be when using 3 k

G4E01	What is the purpose of a capacitance hat on a mobile antenna?
	C To electrically lengthen a physically short antenna
C4E02	What is the purpose of a corona ball on an HF mobile antenna?
G4LUZ	
	D To reduce RF voltage discharge from the tip of the antenna while transmitting
G4E03 \	Which of the following direct, fused power connections would be the best for a 100 watt HF mobile installation A To the battery using heavy-gauge wire
G4E04 \	Why is it best NOT to draw the DC power for a 100 watt HF transceiver from a vehicle's auxiliary power socket
	B The socket's wiring may be inadequate for the current drawn by the transceiver
C4505 1	Which of the following most limits an HF mobile installation?
G4E05	C Efficiency of the electrically short antenna
	Efficiency of the electrically short antenna
G4E06	What is one disadvantage of using a shortened mobile antenna as opposed to a full-size antenna?
······································	C Operating bandwidth may be very limited
G4E07 \	Which of the following may cause receive interference in a radio installed in a vehicle?
	D All these choices are correct
G4E08	What is the name of the process by which sunlight is changed directly into electricity? A Photovoltaic conversion
G4E09	What is the approximate open-circuit voltage from a fully illuminated silicon photovoltaic cell?
	B 0.5 VDC
	What is the reason that a series diode is connected between a solar panel and a storage battery that is being charged by the panel?
	B The diode prevents self-discharge of the battery though the panel during times of low or no illumination

G4E11 Which of the following is a disadvantage of using wind as the primary source of power for an emergency station?

C A large energy storage system is needed to supply power when the wind is not blowing

G5: ELECTRICAL PRINCIPLES
G5A: - Reactance; inductance; capacitance; impedance; impedance matching
G5A01 What is impedance?
C The opposition to the flow of current in an AC circuit
G5A02 What is reactance?
B Opposition to the flow of alternating current caused by capacitance or inductance
G5A03 Which of the following causes opposition to the flow of alternating current in an inductor?
D Reactance
G5A04 Which of the following causes opposition to the flow of alternating current in a capacitor?
C Reactance
G5A05 How does an inductor react to AC?
D As the frequency of the applied AC increases, the reactance increases
G5A06 How does a capacitor react to AC? A As the frequency of the applied AC increases, the reactance decreases
G5A07 What happens when the impedance of an electrical load is equal to the output impedance of a power source, assuming both impedances are resistive?
D The source can deliver maximum power to the load
G5A08 What is one reason to use an impedance matching transformer? B To maximize the transfer of power
B To maximize the transfer of power
G5A09 What unit is used to measure reactance?
B Ohm
G5A10 Which of the following devices can be used for impedance matching at radio frequencies?
D All these choices are correct
G5A11 Which of the following describes one method of impedance matching between two AC circuits? A Insert an LC network between the two circuits

G5B01 Wh	at dB change represents a factor of two increase or decrease in power?
В	at dB change represents a factor of two increase or decrease in power? Approximately 3 dB
G5B02 Ho v	v does the total current relate to the individual currents in each branch of a purely resistive parallel circuit It equals the sum of the currents through each branch
С	It equals the sum of the currents through each branch
,	
G5B03 Ho v	v many watts of electrical power are used if 400 VDC is supplied to an 800 ohm load?
В	200 watts
G5B04 Ho v	w many watts of electrical power are used by a 12 VDC light bulb that draws 0.2 amperes?
A	2.4 watts
G5B05 Ho v	w many watts are dissipated when a current of 7.0 milliamperes flows through a 1250 ohm resistance?
A	Approximately 61 milliwatts
G5B06 Wh	at is the output PEP from a transmitter if an oscilloscope measures 200 volts peak-to-peak across a 50 ohm
dur	nmy load connected to the transmitter output?
В	100 watts
C5B07 Wh	at value of an AC signal produces the same power dissination in a resistor as a DC voltage of the same valu
G3D07 ••••	at value of an AC signal produces the same power dissipation in a resistor as a DC voltage of the same valu The RMS value
C	The RMS value
G5B08 Wh	at is the peak-to-peak voltage of a sine wave with an RMS voltage of 120.0 volts?
D	339.4 volts
G5B09 Wh	at is the RMS voltage of a sine wave with a value of 17 volts peak?
В	12 volts
G5B10 Wh	at percentage of power loss would result from a transmission line loss of 1 dB?
С	20.6 percent
CED11 Wh	at in the units of weak any alone way, or to accomp a course for an any and alone and a
G2RII WI	at is the ratio of peak envelope power to average power for an unmodulated carrier? 1.00
ь	1.00
G5B12 Wh	at would be the RMS voltage across a 50 ohm dummy load dissipating 1200 watts?
	245 volts
_	
G5B13 Wh	at is the output PEP of an unmodulated carrier if an average reading wattmeter connected to the transmitte
	put indicates 1060 watts?
В	1060 watts
	at is the output PEP from a transmitter if an oscilloscope measures 500 volts peak-to-peak across a 50 ohn
0== 1	

G5C: - Resistors, capacitors, and inductors in series and parallel; transformers	
G5C01 What causes a voltage to appear across the secondary winding of a transformer when an AC voltage source is connected across its primary winding?	
C Mutual inductance	
G5C02 What happens if a signal is applied to the secondary winding of a 4:1 voltage step-down transformer instead of the primary winding?	
A The output voltage is multiplied by 4	
G5C03 Which of the following components increases the total resistance of a resistor?	
B A series resistor	
G5C04 What is the total resistance of three 100 ohm resistors in parallel?	
C 33.3 ohms	
G5C05 If three equal value resistors in series produce 450 ohms, what is the value of each resistor?	
C 150 ohms	
G5C06 What is the RMS voltage across a 500-turn secondary winding in a transformer if the 2250-turn primary is connected to 120 VAC?	
C 26.7 volts	
G5C07 What is the turns ratio of a transformer used to match an audio amplifier having 600 ohm output impedance to speaker having 4 ohm impedance?	а
A 12.2 to 1	
G5C08 What is the equivalent capacitance of two 5.0 nanofarad capacitors and one 750 picofarad capacitor connected parallel?	in
D 10.750 nanofarads	
,	
G5C09 What is the capacitance of three 100 microfarad capacitors connected in series?	auses a voltage to appear across the secondary winding of a transformer when an AC voltage source is ted across its primary winding? utual inductance appens if a signal is applied to the secondary winding of a 4:1 voltage step-down transformer instead of mary winding? are output voltage is multiplied by 4 of the following components increases the total resistance of a resistor? series resistor s the total resistance of three 100 ohm resistors in parallel? 3.3 ohms e equal value resistors in series produce 450 ohms, what is the value of each resistor? 50 ohms the RNS voltage across a 500-turn secondary winding in a transformer if the 2250-turn primary is ted to 120 VAC? 5.7 volts s the turns ratio of a transformer used to match an audio amplifler having 600 ohm output impedance to a real-wing 4 ohm impedance? 2.2 to 1 s the equivalent capacitance of two 5.0 nanofarad capacitors and one 750 picofarad capacitor connected in 12 2.750 nanofarads s the capacitance of three 100 microfarad capacitors connected in series? 3.3 microfarads s the inductance of a 20 millihenry inductor connected in series with a 50 millihenry inductor? 2 millihenries s the capacitance of a 20 microfarad capacitor connected in series with a 50 millihenry inductor? 2 millihenries s the capacitance of a 20 microfarad capacitor connected in series with a 50 microfarad capacitor? 3.3 microfarads of the following components should be added to a capacitor to increase the capacitance? capacitor in parallel of the following components should be added to an inductor to increase the inductance? 1 inductor in series s the total resistance of a 10 ohm, a 20 ohm, and a 50 ohm resistor connected in parallel? 9 ohms the conductor of the primary winding of many voltage step-up transformers larger in diameter than the tor of the secondary winding? 10 cocommodate the higher current of the primary s the value in nanofarads (nF) of a 22,000 picofarad (pF) capacitor?
C 33.3 microfarads	
G5C10 What is the inductance of three 10 millihenry inductors connected in parallel?	
C 3.3 millihenries	
G5C11 What is the inductance of a 20 millihenry inductor connected in series with a 50 millihenry inductor?	
C 70 millihenries	
G5C12 What is the capacitance of a 20 microfarad capacitor connected in series with a 50 microfarad capacitor?	
G5C13 Which of the following components should be added to a capacitor to increase the capacitance?	
C production in paramet	
G5C14 Which of the following components should be added to an inductor to increase the inductance?	
P All Illuuctor III Series	
G5C15 What is the total resistance of a 10 ohm, a 20 ohm, and a 50 ohm resistor connected in parallel? A 5.9 ohms	
G5C16 Why is the conductor of the primary winding of many voltage step-up transformers larger in diameter than the conductor of the secondary winding?	
B To accommodate the higher current of the primary	
C inn	
V <u>124</u>	
G5C18 What is the value in microfarads of a 4700 nanofarad (nF) capacitor?	
D 4.7	

G6: CIRCUIT COMPONENTS G6A: - Resistors; capacitors; inductors; rectifiers; solid-state diodes and transistors; vacuum tubes; batteries What is the minimum allowable discharge voltage for maximum life of a standard 12 volt lead-acid battery? G6A01 C 10.5 volts G6A02 What is an advantage of the low internal resistance of nickel-cadmium batteries? B High discharge current G6A03 What is the approximate junction threshold voltage of a germanium diode? B 0.3 volts G6A04 Which of the following is an advantage of an electrolytic capacitor? C High capacitance for a given volume G6A05 What is the approximate junction threshold voltage of a conventional silicon diode? C 0.7 volts G6A06 Which of the following is a reason not to use wire-wound resistors in an RF circuit? B The resistor's inductance could make circuit performance unpredictable G6A07 What are the stable operating points for a bipolar transistor used as a switch in a logic circuit? A Its saturation and cutoff regions G6A08 What is an advantage of using a ferrite core toroidal inductor? D All these choices are correct G6A09 Which of the following describes the construction of a MOSFET? B The gate is separated from the channel with a thin insulating layer G6A10 Which element of a triode vacuum tube is used to regulate the flow of electrons between cathode and plate? A Control grid G6A11 What happens when an inductor is operated above its self-resonant frequency? C It becomes capacitive G6A12 What is the primary purpose of a screen grid in a vacuum tube? A To reduce grid-to-plate capacitance G6A13 Why is the polarity of applied voltages important for polarized capacitors? D All these choices are correct

G6A14 Which of the following is an advantage of ceramic capacitors as compared to other types of capacitors?

D Comparatively low cost

G6B01 What is meant by the term MMIC? B Monolithic Microwave Integrated Circuit G6B03 Which of the following is an advantage of CMOS integrated circuits compared to TTL integrated circuits? A Low power consumption G6B04 What is meant by the term ROM? B Read Only Memory G6B05 What is meant when memory is characterized as non-volatile? C The stored information is maintained even if power is removed G6B06 What kind of device is an integrated circuit operational amplifier? D Analog Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6B08 How is an LED biased when emitting light? D Forward biased G6B09 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6B10 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono G6B13 Which of these connector types is commonly used for RF connections at frequencies up to 150 MHz?		Analog and digital integrated circuits (ICs); microprocessors; memory; I/O devices; microwave ICs (MMICs); display devicences; ferrite cores
What is meant by the term MMIC?	G6B01	What determines the performance of a ferrite core at different frequencies?
B Monolithic Microwave Integrated Circuit G6B03 Which of the following is an advantage of CMOS integrated circuits compared to TTL integrated circuits? A Low power consumption G6B04 What is meant by the term ROM? B Read Only Memory C The stored information is maintained even if power is removed G6B05 What kind of device is an integrated circuit operational amplifier? D Analog G6B07 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6B08 How is an LED biased when emitting light? D Forward biased G6B09 A It utilizes ambient or back lighting G6B10 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz RCC RCA Phono		C The composition, or "mix," of materials used
B Monolithic Microwave Integrated Circuit G6B03 Which of the following is an advantage of CMOS integrated circuits compared to TTL integrated circuits? A Low power consumption G6B04 What is meant by the term ROM? B Read Only Memory C The stored information is maintained even if power is removed G6B05 What kind of device is an integrated circuit operational amplifier? D Analog G6B07 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6B08 How is an LED biased when emitting light? D Forward biased G6B09 A It utilizes ambient or back lighting G6B10 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz RCC RCA Phono	G6B02	What is meant by the term MMIC?
A Low power consumption G6804 What is meant by the term ROM? B Read Only Memory G6805 What is meant when memory is characterized as non-volatile? C The stored information is maintained even if power is removed G6806 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	GODOZ	
A Low power consumption G6804 What is meant by the term ROM? B Read Only Memory G6805 What is meant when memory is characterized as non-volatile? C The stored information is maintained even if power is removed G6806 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		
G6804 What is meant by the term ROM? B Read Only Memory C The stored information is maintained even if power is removed G6805 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A Moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6812 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	G6B03	
B Read Only Memory G6805 What is meant when memory is characterized as non-volatile? C The stored information is maintained even if power is removed G6806 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6812 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		A Low power consumption
G6805 What is meant when memory is characterized as non-volatile? C The stored information is maintained even if power is removed G6806 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6812 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	G6B04	What is meant by the term ROM?
C The stored information is maintained even if power is removed G6806 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6812 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		B Read Only Memory
C The stored information is maintained even if power is removed G6806 What kind of device is an integrated circuit operational amplifier? D Analog G6807 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6808 How is an LED biased when emitting light? D Forward biased G6809 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6810 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6811 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6812 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		
G6B06 What kind of device is an integrated circuit operational amplifier? D Analog G6B07 Which of the following describes a type N connector? A Moisture-resistant RF connector useful to 10 GHz G6B08 How is an LED biased when emitting light? D Forward biased G6B09 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6B10 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	G6B05	
D Analog Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6B08 How is an LED biased when emitting light? D Forward biased G6B09 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6B10 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		I ne stored information is maintained even if power is removed
G6B07 Which of the following describes a type N connector? A A moisture-resistant RF connector useful to 10 GHz G6B08 How is an LED biased when emitting light? D Forward biased G6B09 Which of the following is a characteristic of a liquid crystal display? A It utilizes ambient or back lighting G6B10 How does a ferrite bead or core reduce common-mode RF current on the shield of a coaxial cable? A By creating an impedance in the current's path G6B11 What is a type SMA connector? A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	GODOJ	
A By creating an impedance in the current's path G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		
G6B11 What is a type SMA connector? B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	G6B10	
B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono		A By creating an impedance in the current's path
B A small threaded connector suitable for signals up to several GHz G6B12 Which of these connector types is commonly used for audio signals in Amateur Radio stations? C RCA Phono	G6B11	What is a type SMA connector?
C RCA Phono	00011	
C RCA Phono		
C RCA Phono	G6B12	Which of these connector types is commonly used for audio signals in Amateur Radio stations?
G6B13 Which of these connector types is commonly used for RF connections at frequencies up to 150 MHz?		C RCA Phono
	G6B13	Which of these connector types is commonly used for RF connections at frequencies up to 150 MHz?

G7: PRACTICAL CIRCUITS
G7A: - Power supplies; schematic symbols
G7A01 What useful feature does a power supply bleeder resistor provide? B It ensures that the filter capacitors are discharged when power is removed
G7A02 Which of the following components are used in a power supply filter network? D Capacitors and inductors
G7A03 Which type of rectifier circuit uses two diodes and a center-tapped transformer? A Full-wave
G7A04 What is an advantage of a half-wave rectifier in a power supply? A Only one diode is required
G7A05 What portion of the AC cycle is converted to DC by a half-wave rectifier? B 180 degrees
G7A06 What portion of the AC cycle is converted to DC by a full-wave rectifier? D 360 degrees
G7A07 What is the output waveform of an unfiltered full-wave rectifier connected to a resistive load? A A series of DC pulses at twice the frequency of the AC input
G7A08 Which of the following is an advantage of a switchmode power supply as compared to a linear power supply? C High-frequency operation allows the use of smaller components
G7A09 Which symbol in figure G7-1 represents a field effect transistor? (view image) C Symbol 1
G7A10 Which symbol in figure G7-1 represents a Zener diode? (view image) D Symbol 5
G7A11 Which symbol in figure G7-1 represents an NPN junction transistor? (view image) B Symbol 2
G7A12 Which symbol in figure G7-1 represents a solid core transformer? (view image) C Symbol 6
G7A13 Which symbol in figure G7-1 represents a tapped inductor? (view image) A Symbol 7

7B01 \	What is the reason for neutralizing the final amplifier stage of a transmitter?
······································	B To eliminate self-oscillations
7B02 \	Which of these classes of amplifiers has the highest efficiency?
	D Class C
7B03 \	Which of the following describes the function of a two-input AND gate?
	B Output is high only when both inputs are high
7B04 \	Which of the following describes the function of a two input NOR gate?
	C Output is low when either or both inputs are high
7B05 I	low many states does a 3-bit binary counter have?
	C 8
7B06 \	What is a shift register?
i	A Clocked array of circuits that passes data in steps along the array
7B07 \	Which of the following are basic components of a sine wave oscillator?
	D A filter and an amplifier operating in a feedback loop
7B08 I	How is the efficiency of an RF power amplifier determined?
······································	B Divide the RF output power by the DC input power
7B09 \	What determines the frequency of an LC oscillator?
······································	C The inductance and capacitance in the tank circuit
7B10 \	Which of the following describes a linear amplifier?
, , , , , , ,	B An amplifier in which the output preserves the input waveform
7B11 I	or which of the following modes is a Class C power stage appropriate for amplifying a modulated signal?

G7C: - Receivers and transmitters; filters; oscillators
G7C01 Which of the following is used to process signals from the balanced modulator then send them to the mixer in some single sideband phone transmitters?
B Filter
G7C02 Which circuit is used to combine signals from the carrier oscillator and speech amplifier then send the result to the filter in some single sideband phone transmitters?
D Balanced modulator
G7C03 What circuit is used to process signals from the RF amplifier and local oscillator then send the result to the IF filter in a superheterodyne receiver?
C Mixer
G7C04 What circuit is used to combine signals from the IF amplifier and BFO and send the result to the AF amplifier in some single sideband receivers?
D Product detector
G7C05 Which of the following is an advantage of a direct digital synthesizer (DDS)?
D Variable frequency with the stability of a crystal oscillator
G7C06 What should be the impedance of a low-pass filter as compared to the impedance of the transmission line into which it is inserted?
B About the same
G7C07 What is the simplest combination of stages that implement a superheterodyne receiver?
C HF oscillator, mixer, detector
G7C08 What circuit is used in analog FM receivers to convert IF output signals to audio?
D Discriminator
G7C09 What is the phase difference between the I and Q signals that software-defined radio (SDR) equipment uses for modulation and demodulation?
B 90 degrees
G7C10 What is an advantage of using I and Q signals in software-defined radios (SDRs)?
B All types of modulation can be created with appropriate processing.
G7C11 What is meant by the term "software-defined radio" (SDR)?
G7C11 What is meant by the term "software-defined radio" (SDR)? A radio in which most major signal processing functions are performed by software
G7C12 What is the frequency above which a low-pass filter's output power is less than half the input power?
C Cutoff frequency
G7C13 What term specifies a filter's maximum ability to reject signals outside its passband?
D Ultimate rejection
G7C14 The bandwidth of a band-pass filter is measured between what two frequencies? A Upper and lower half-power
A Upper and lower nair-power
G7C15 What term specifies a filter's attenuation inside its passband? A Insertion loss
G7C16 Which of the following is a typical application for a Direct Digital Synthesizer?
A A high-stability variable frequency oscillator in a transceiver

G8: SIGNALS AND EMISSIONS G8A: - Carriers and modulation: AM; FM; single sideband; modulation envelope; digital modulation; overmodulation **G8A01** How is an FSK signal generated? B By changing an oscillator's frequency directly with a digital control signal G8A02 What is the name of the process that changes the phase angle of an RF signal to convey information? **B** Phase modulation G8A03 What is the name of the process that changes the instantaneous frequency of an RF wave to convey information? **D** Frequency modulation G8A04 What emission is produced by a reactance modulator connected to a transmitter RF amplifier stage? **B** Phase modulation G8A05 What type of modulation varies the instantaneous power level of the RF signal? **D** Amplitude modulation G8A06 Which of the following is characteristic of QPSK31? C The bandwidth is slightly higher than BPSK31 G8A07 Which of the following phone emissions uses the narrowest bandwidth? A Single sideband G8A08 Which of the following is an effect of overmodulation? D Excessive bandwidth G8A09 What type of modulation is used by the FT8 digital mode? A 8-tone frequency shift keying G8A10 What is meant by the term "flat-topping," when referring to a single sideband phone transmission? C Signal distortion caused by excessive drive

A The waveform created by connecting the peak values of the modulated signal

G8A12 Which of the following narrow-band digital modes can receive signals with very low signal-to-noise ratios?

G8A11 What is the modulation envelope of an AM signal?

B FT8

	nich mixer input is varied or tuned to convert signals of different frequencies to an intermediate frequency
(IF	,
В	Local oscillator
fre	a receiver mixes a 13.800 MHz VFO with a 14.255 MHz received signal to produce a 455 kHz intermediate quency (IF) signal, what type of interference will a 13.345 MHz signal produce in the receiver?
В	Image response
G8B03 W F	nat is another term for the mixing of two RF signals?
Α	Heterodyning
	nat is the stage in a VHF FM transmitter that generates a harmonic of a lower frequency signal to reach the sired operating frequency?
D	Multiplier
G8B05 W	nat is the approximate bandwidth of a PACTOR-III signal at maximum data rate?
D	2300 Hz
fre D	quency? 16 kHz
	nat is the frequency deviation for a 12.21 MHz reactance modulated oscillator in a 5 kHz deviation, 146.52 M phone transmitter?
В	
<u> </u>	ny is it important to know the duty cycle of the mode you are using when transmitting?
<u> </u>	
G8B08 W h	
G8B08 W h	Some modes have high duty cycles that could exceed the transmitter's average power rating
G8B08 Wh G8B09 Wh	Some modes have high duty cycles that could exceed the transmitter's average power rating by is it good to match receiver bandwidth to the bandwidth of the operating mode?
G8B08 Wh G8B09 Wh D G8B10 Wh	Some modes have high duty cycles that could exceed the transmitter's average power rating by is it good to match receiver bandwidth to the bandwidth of the operating mode? It results in the best signal-to-noise ratio
G8B08 Wh G8B09 Wh D G8B10 Wh	Some modes have high duty cycles that could exceed the transmitter's average power rating by is it good to match receiver bandwidth to the bandwidth of the operating mode? It results in the best signal-to-noise ratio nat is the relationship between transmitted symbol rate and bandwidth?
G8B08 Wh G8B09 Wh D G8B10 Wh B	Some modes have high duty cycles that could exceed the transmitter's average power rating ny is it good to match receiver bandwidth to the bandwidth of the operating mode? It results in the best signal-to-noise ratio nat is the relationship between transmitted symbol rate and bandwidth? Higher symbol rates require wider bandwidth

	ital emission modes
	what band do amateurs share channels with the unlicensed Wi-Fi service?
С	2.4 GHz
G8C02 W r	nich digital mode is used as a low-power beacon for assessing HF propagation?
	WSPR
G8C03 Wh	nat part of a packet radio frame contains the routing and handling information?
С	Header
G8C04 W h	nich of the following describes Baudot code?
С	A 5-bit code with additional start and stop bits
·····	
<u> </u>	the PACTOR protocol, what is meant by an NAK response to a transmitted packet?
А	The receiver is requesting the packet be retransmitted
	nat action results from a failure to exchange information due to excessive transmission attempts when using CTOR or WINMOR?
В	The connection is dropped
p	
G8C07 Ho	w does the receiving station respond to an ARQ data mode packet containing errors?
В	It requests the packet be retransmitted
COCOO WA	nich of the following statements is true about PSK31?
L	Upper case letters use longer Varicode symbols and thus slow down transmission
_	
G8C09 W h	nat does the number 31 represent in "PSK31"?
Α	The approximate transmitted symbol rate
G8C10 Ho	w does forward error correction (FEC) allow the receiver to correct errors in received data packets?
С	By transmitting redundant information with the data
G8C11 Ho	w are the two separate frequencies of a Frequency Shift Keyed (FSK) signal identified?
D	Mark and space
·····	
	nich type of code is used for sending characters in a PSK31 signal?
А	Varicode
G8C13 W h	nat is indicated on a waterfall display by one or more vertical lines on either side of a digital signal?
	Overmodulation
D	
-	nich of the following describes a waterfall display?

G9: ANTENNAS AND FEED LINES

G9A: - Antenna feed lines: characteristic impedance and attenuation; SWR calculation, measurement, and effects; matching networks Which of the following factors determine the characteristic impedance of a parallel conductor antenna feed line? G9A01 A The distance between the centers of the conductors and the radius of the conductors G9A02 What are the typical characteristic impedances of coaxial cables used for antenna feed lines at amateur stations? **B** 50 and 75 ohms G9A03 What is the typical characteristic impedance of "window line" parallel transmission line? D 450 ohms G9A04 What might cause reflected power at the point where a feed line connects to an antenna? C A difference between feed-line impedance and antenna feed-point impedance G9A05 How does the attenuation of coaxial cable change as the frequency of the signal it is carrying increases? **B** Attenuation increases G9A06 In what units is RF feed line loss usually expressed? D Decibels per 100 feet G9A07 What must be done to prevent standing waves on an antenna feed line? The antenna feed point impedance must be matched to the characteristic impedance of the feed line If the SWR on an antenna feed line is 5 to 1, and a matching network at the transmitter end of the feed line is G9A08 adjusted to 1 to 1 SWR, what is the resulting SWR on the feed line? 5 to 1 What standing wave ratio will result when connecting a 50 ohm feed line to a non-reactive load having 200 ohm G9A09 impedance? A 4:1 What standing wave ratio will result when connecting a 50 ohm feed line to a non-reactive load having 10 ohm G9A10 impedance? D 5:1 What standing wave ratio will result when connecting a 50 ohm feed line to a non-reactive load having 50 ohm G9A11 impedance? B 1:1 G9A12 What is the interaction between high standing wave ratio (SWR) and transmission line loss? B If a transmission line is lossy, high SWR will increase the loss G9A13 What is the effect of transmission line loss on SWR measured at the input to the line? A The higher the transmission line loss, the more the SWR will read artificially low

G9B01 \	What is one disadvantage of a directly fed random-wire HF antenna?
	B You may experience RF burns when touching metal objects in your station
	Which of the following is a common way to adjust the feed-point impedance of a quarter wave ground-plane vertical antenna to be approximately 50 ohms?
	B Slope the radials downward
G9B03 \	Which of the following best describes the radiation pattern of a quarter-wave, ground-plane vertical antenna?
	D Omnidirectional in azimuth
G9B04 \	What is the radiation pattern of a dipole antenna in free space in a plane containing the conductor? A It is a figure-eight at right angles to the antenna
G9B05	How does antenna height affect the horizontal (azimuthal) radiation pattern of a horizontal dipole HF antenna
	C If the antenna is less than 1/2 wavelength high, the azimuthal pattern is almost omnidirectiona
G9B06 \	Where should the radial wires of a ground-mounted vertical antenna system be placed?
	C On the surface of the Earth or buried a few inches below the ground
	How does the feed-point impedance of a $1/2$ wave dipole antenna change as the antenna is lowered below $1/4$ wave above ground?
	B It steadily decreases
	How does the feed point impedance of a 1/2 wave dipole change as the feed point is moved from the center toward the ends?
	A It steadily increases
	Which of the following is an advantage of a horizontally polarized as compared to a vertically polarized HF antenna?
	A Lower ground reflection losses
	A Lower ground reflection losses What is the approximate length for a 1/2 wave dipole antenna cut for 14.250 MHz?
G9B10	What is the approximate length for a 1/2 wave dipole antenna cut for 14.250 MHz? D 32 feet What is the approximate length for a 1/2 wave dipole antenna cut for 3.550 MHz?
G9B10	What is the approximate length for a 1/2 wave dipole antenna cut for 14.250 MHz? D 32 feet

Which of the following would increase the bandwidth of a Yagi antenna?	G9C: - Direction	nal antennas
A Larger-diameter elements G9002 What is the approximate length of the driven element of a Yagi antenna? B [1/2 wavelength G9003 How do the lengths of a three-element Yagi reflector and director compare to that of the driven element? A The reflector is longer, and the director is shorter G9004 How does antenna gain stated in dBi compare to gain stated in dBd for the same antenna? B [dBi gain figures are 2.15 dB higher than dBd gain figures G9005 How does increasing boom length and adding directors affect a Yagi antenna? A [Gain increases G9006 What configuration of the loops of a two-element quad antenna must be used for the antenna to operate as a beam antenna, assuming one of the elements is used as a reflector? D The reflector element must be approximately 5 percent longer than the driven element G9007 What does "front-to-back ratio" mean in reference to a Yagi antenna? C The power radiated in the major radiation lobe compared to that in the opposite direction G9009 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna G9009 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9010 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagi antenna? A Id directional antenna G9012 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9014 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagiantenna? A Id does not require that the driven element goes natenna gain? A Id does not require that the driven element goes natenna gain? A ABout the same G9014 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagiant	r	
B 1/2 wavelength	A La	arger-diameter elements
B 1/2 wavelength	G9C02 What i	s the approximate length of the driven element of a Yagi antenna?
A The reflector is longer, and the director is shorter B dBi gain figures are 2.15 dB higher than dBd gain figures B dBi gain figures are 2.15 dB higher than dBd gain figures How does increasing boom length and adding directors affect a Yagi antenna? A Gain increases G9005 How does increasing boom length and adding directors affect a Yagi antenna? A Gain increases G9006 What configuration of the loops of a two-element quad antenna must be used for the antenna to operate as a beam antenna, assuming one of the elements is used as a reflector? D The reflector element must be approximately 5 percent longer than the driven element G9007 What does "front-to-back ratio" mean in reference to a Yagi antenna? C The power radiated in the major radiation lobe compared to that in the opposite direction G9008 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna G9009 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9010 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagantenna? D All these choices are correct G9011 Which of the following is an advantage of using a gamma match with a Yagi antenna? A If does not require that the driven element be insulated from the boom G9012 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9014 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A 1/4 wavelength G9015 What is meant by the terms dBi and dBd when referring to antenna gain? A 2/4 blood antenna G9016 G9017 A 1/4 blood of the following is an isotropic antenna, dBd refers to a dipole antenna	В 1,	/2 wavelength
A The reflector is longer, and the director is shorter G9C04	G9C03 How de	o the lengths of a three-element Yagi reflector and director compare to that of the driven element?
B dBi gain figures are 2.15 dB higher than dBd gain figures G9C05 How does increasing boom length and adding directors affect a Yagi antenna? A isain increases G9C06 What configuration of the loops of a two-element quad antenna must be used for the antenna to operate as a beam antenna, assuming one of the elements is used as a reflector? D in reflector element must be approximately 5 percent longer than the driven element G9C07 What does "front-to-back ratio" mean in reference to a Yagi antenna? C The power radiated in the major radiation lobe compared to that in the opposite direction G9C08 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna G9C09 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagi antenna? D All these choices are correct G9C11 Which of the following is an advantage of using a gamma match with a Yagi antenna? A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A 1/4 wavelength G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C15 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
How does increasing boom length and adding directors affect a Yagi antenna?	`	
A Gain increases G9C06 What configuration of the loops of a two-element quad antenna must be used for the antenna to operate as a beam antenna, assuming one of the elements is used as a reflector? D [The reflector element must be approximately 5 percent longer than the driven element G9C07 What does "front-to-back ratio" mean in reference to a Yagi antenna? C [The power radiated in the major radiation lobe compared to that in the opposite direction G9C08 What is meant by the "main lobe" of a directive antenna? D [The direction of maximum radiated field strength from the antenna G9C09 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B [Approximately 3 dB higher] G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagantenna? D [All these choices are correct] G9C11 Which HF antenna would be the best to use for minimizing interference? C [A directional antenna] G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A [It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A [1/4 wavelength] G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A [1/4 wavelength] G9C14 What is meant by the terms dBi and dBd when referring to antenna gain? A [Bi refers to an isotropic antenna, dBd refers to a dipole antenna] A [Bi refers to an isotropic antenna, dBd refers to a dipole antenna		
beam antenna, assuming one of the elements is used as a reflector? D The reflector element must be approximately 5 percent longer than the driven element G9C07 What does "front-to-back ratio" mean in reference to a Yagi antenna? C The power radiated in the major radiation lobe compared to that in the opposite direction G9C08 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna G9C09 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagantenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A A About the same G9C13 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	L	
What does "front-to-back ratio" mean in reference to a Yagi antenna? C The power radiated in the major radiation lobe compared to that in the opposite direction G9C08 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna G9C09 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagi antenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/A wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
C The power radiated in the major radiation lobe compared to that in the opposite direction G9C08 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna G9C09 How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagantenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	D TI	he reflector element must be approximately 5 percent longer than the driven element
G9C08 What is meant by the "main lobe" of a directive antenna? D The direction of maximum radiated field strength from the antenna	G9C07 What o	does "front-to-back ratio" mean in reference to a Yagi antenna?
The direction of maximum radiated field strength from the antenna	СП	he power radiated in the major radiation lobe compared to that in the opposite direction
How does the gain of two three-element, horizontally polarized Yagi antennas spaced vertically 1/2 wavelength apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yamantenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagi antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	G9C08 What i	s meant by the "main lobe" of a directive antenna?
apart typically compare to the gain of a single three-element Yagi? B Approximately 3 dB higher G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yagantenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	D TI	he direction of maximum radiated field strength from the antenna
G9C10 Which of the following can be adjusted to optimize forward gain, front-to-back ratio, or SWR bandwidth of a Yasantenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
antenna? D All these choices are correct G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagi antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	ВА	pproximately 3 dB higher
G9C11 Which HF antenna would be the best to use for minimizing interference? C A directional antenna G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagi antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	D A	ll these choices are correct
G9C12 Which of the following is an advantage of using a gamma match with a Yagi antenna? A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yagantenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	G9C11 Which	HF antenna would be the best to use for minimizing interference?
A It does not require that the driven element be insulated from the boom G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yag antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	C A	directional antenna
G9C13 Approximately how long is each side of the driven element of a quad antenna? A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yag antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	G9C12 Which	of the following is an advantage of using a gamma match with a Yagi antenna?
A 1/4 wavelength G9C14 How does the forward gain of a two-element quad antenna compare to the forward gain of a three-element Yag antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	A It	does not require that the driven element be insulated from the boom
antenna? A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
A About the same G9C15 What is meant by the terms dBi and dBd when referring to antenna gain? A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
A dBi refers to an isotropic antenna, dBd refers to a dipole antenna G9C16 What is a beta or hairpin match? A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide	G9C15 What i	s meant by the terms dBi and dBd when referring to antenna gain? Bi refers to an isotropic antenna, dBd refers to a dipole antenna
A It is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide		
impedance matching	A It	is a shorted transmission line stub placed at the feed point of a Yagi antenna to provide

	ich of the following antenna types will be most effective as a Near Vertical Incidence Skywave (NVIS) anteni short-skip communications on 40 meters during the day?
	A horizontal dipole placed between 1/10 and 1/4 wavelength above the ground
G9D02 W h	at is the feed-point impedance of an end-fed half-wave antenna?
D	Very high
G9D03 In	which direction is the maximum radiation from a portable VHF/UHF "halo" antenna?
С	Omnidirectional in the plane of the halo
	aat is the primary purpose of antenna traps?
А	To permit multiband operation
G9D05 W h	at is an advantage of vertical stacking of horizontally polarized Yagi antennas?
D	It narrows the main lobe in elevation
	ich of the following is an advantage of a log periodic antenna? Wide bandwidth
	
G9D07 W h	ich of the following describes a log periodic antenna? Element length and spacing vary logarithmically along the boom
CODOO Ho	w does a "screwdriver" mobile antenna adjust its feed-point impedance?
B	By varying the base loading inductance
G9D09 W h	at is the primary use of a Beverage antenna?
Α	Directional receiving for low HF bands
	which direction or directions does an electrically small loop (less than 1/3 wavelength in circumference) hav Is in its radiation pattern?
В	Broadside to the loop
G9D11 W h	ich of the following is a disadvantage of multiband antennas?
D	They have poor harmonic rejection
G9D12 W h	at is the common name of a dipole with a single central support?
А	Inverted V
G9D13 W h	at is the combined vertical and horizontal polarization pattern of a multi-wavelength, horizontal loop antenn
	Virtually omnidirectional with a lower peak vertical radiation angle than a dipole

G0: ELECTRICAL AND RF SAFETY
G0A: - RF safety principles, rules and guidelines; routine station evaluation
G0A01 What is one way that RF energy can affect human body tissue? A It heats body tissue
G0A02 Which of the following properties is important in estimating whether an RF signal exceeds the maximum permissible exposure (MPE)?
D All these choices are correct
G0A03 How can you determine that your station complies with FCC RF exposure regulations?
D All these choices are correct
GOA04 What does "time averaging" mean in reference to RF radiation exposure?
D The total RF exposure averaged over a certain time
G0A05 What must you do if an evaluation of your station shows RF energy radiated from your station exceeds permissible limits?
A Take action to prevent human exposure to the excessive RF fields
G0A06 What precaution should be taken when installing a ground-mounted antenna?
D It should be installed such that it is protected against unauthorized access
G0A07 What effect does transmitter duty cycle have when evaluating RF exposure? A lower transmitter duty cycle permits greater short-term exposure levels
A ja lower transmitter daty cycle permits greater short term exposure levels
G0A08 Which of the following steps must an amateur operator take to ensure compliance with RF safety regulations when transmitter power exceeds levels specified in FCC Part 97.13?
C Perform a routine RF exposure evaluation
G0A09 What type of instrument can be used to accurately measure an RF field?
B A calibrated field strength meter with a calibrated antenna
G0A10 What is one thing that can be done if evaluation shows that a neighbor might receive more than the allowable limit of RF exposure from the main lobe of a directional antenna?
D Take precautions to ensure that the antenna cannot be pointed in their direction
G0A11 What precaution should you take if you install an indoor transmitting antenna?
C Make sure that MPE limits are not exceeded in occupied areas

GOB: - 9	Station safety: electrical shock, safety grounding, fusing, interlocks, wiring, antenna and tower safety
G0B01	Which wire or wires in a four-conductor connection should be attached to fuses or circuit breakers in a device operated from a 240 VAC single phase source?
	A Only the two wires carrying voltage
G0B02	According the National Electrical Code, what is the minimum wire size that may be used safely for wiring with 20 ampere circuit breaker?
	C AWG number 12
G0B03	Which size of fuse or circuit breaker would be appropriate to use with a circuit that uses AWG number 14 wirin
	D 15 amperes
G0B04	Which of the following is a primary reason for not placing a gasoline-fueled generator inside an occupied area? A Danger of carbon monoxide poisoning
G0B05	Which of the following conditions will cause a Ground Fault Circuit Interrupter (GFCI) to disconnect the 120 or 240 Volt AC line power to a device?
	B Current flowing from one or more of the voltage-carrying wires directly to ground
G0B06	Which of the following is covered by the National Electrical Code?
00000	C Electrical safety inside the ham shack
G0B07	Which of these choices should be observed when climbing a tower using a safety belt or harness?
	B Confirm that the belt is rated for the weight of the climber and that it is within its allowable service life
COROS	What should be done by any person preparing to climb a tower that supports electrically powered devices?
GODOO	B Make sure all circuits that supply power to the tower are locked out and tagged
G0B09	Which of the following is true of an emergency generator installation?
	A The generator should be located in a well-ventilated area
	Will be of the falls. The first days of an head the colds of
G0B10	Which of the following is a danger from lead-tin solder? A Lead can contaminate food if hands are not washed carefully after handling the solder
	A Ecoa can contaminate root it hands are not washed carefully area handling the solder
G0B11	Which of the following is good practice for lightning protection grounds?
	D They must be bonded together with all other grounds
COR12	What is the purpose of a power supply interlock?
GUB12	C To ensure that dangerous voltages are removed if the cabinet is opened
	C ito ensure that uangerous voltages are removed if the Cabinet is Opened
G0B13	What must you do when powering your house from an emergency generator?
	A Disconnect the incoming utility power feed
C0D14	What precaution should you take whenever you adjust or repair an antenna?
